Mocking Metaverse

Which whitepaper did you last read?

These texts are a roadmap for all future tokens. This whitepaper is a tutorial, a guide. It belongs to a token with no selling pressure. It is a masterpiece where the team is the whole community.

Why Mock ?

Because there is a scenario where the king is naked. Doge is making fun of major tokens and is unclaimed, so is the mock. We're making fun of the metaverse. The joke is the greatest truth. As you will see in the articles you will read shortly, many projects have harmed you under the name of metaverse. Hello, there is no such thing as a metaverse. You must understand this first. **Stupid games, stupid nfts can never be metaverse**. Mocking because what did the projects that promise you serious things did? A big nothing. They created hype and only harmed you. You won \$50 but you lost \$100.

If you want to learn something, if you want to see exactly how a project is managed, read this document without getting bored. Every move on this coin contains a lot of experience and hard work.

Introduction

Let's take a look at those who agree with us.

Elon Musk, CEO of SpaceX and Tesla, is not impressed by the Metaverse and is not convinced that we will all be disappearing into this hyper-virtual world anytime soon. Musk's comments came in an interview with the Youtube channel 'The Babylon Bee'.

When asked about the Metaverse, Musk's response was, "I don't know if I necessarily buy into this Metaverse stuff, although people talk to me a lot about it." He further added that he does not see a future where people want to stay in this virtual reality that companies such as Meta are pushing.

Musk said he does not believe that people would abandon the physical world and replace it with a virtual one, especially with a screen on their faces. “[You know when I grew up it was like ‘don’t sit too close to the TV it’s gonna ruin your eyesight’ and now TV is like literally right here \(puts his hand very close to his face\), I’m like umm what? Is that good for you?](#)” Musk joked about the absurdity of having a screen close to your face for long periods of time,

“I don’t see someone strapping a friggin’ screen to their face all day”, he said bluntly. *<https://indianexpress.com/article/technology/tech-news-technology/elon-musk-mocks-metaverse-idea-says-nobody-wants-a-screen-strapped-to-their-face-7686834/>

What Is Metaverse Fraud?

Although the metaverse is this brand new concept, cryptocurrencies and blockchains have been around for a long enough time that we know many of the issues surrounding it.

The metaverse might have plans to expand beyond blockchain but at the core seems to be this technology which, unfortunately, fraudsters have found to be incredibly useful to utilize in order to launder money, steal identities, and conduct scams.

Due to a lack of KYC measures on certain platforms, combined with minimal regulatory measures, fraudsters can test out new methods and, to some extent, enjoy risk-free attempts to defraud both companies and users.

Blockchain-based transaction crime hit a record-high in 2021, a staggering \$7.8 billion, and with the constant threat of hacks as well, there is undoubtedly some level of risk to the many metaverses.

Examples of Metaverse Fraud Work?

Any organization that offers crypto-based services, as well as individuals who choose to venture into the metaverse and the wider crypto-adjacent ecosystem, are met with various risks.

There are a series of schemes and techniques already employed as well as soon-to-be employed in metaverse-adjacent sectors, and experts anticipate new methods unique to these platforms to also appear.

Account takeover (ATO) attacks

Fraudsters will use traditional methods such as phishing attacks to gain access to accounts and rinse them of either currency or NFTs held by the account.

What Is Metaverse Fraud?

Multi-accounting

Fraudsters might look to set up multiple accounts on a certain metaverse platform to launder illegally acquired money or look to abuse promotions. One example scenario could see a fraudster buying an NFT from another account that they also control using dirty money, with the aim of withdrawing once sold onto an honest user.

Irreversible transactions

Crypto is notorious for its transparency, due to the blockchain's open-record information. However, once a transaction is made, it can be nearly impossible to reverse. This works against some consumer expectations, especially compared to offline transactions.

Influencer and affiliate fraud

One renowned instance of crypto influencer fraud saw celebrities such as Elon Musk and Jeff Bezos have their Twitter accounts hacked as part of a fake giveaway. A similar thing could be seen in future metaverse promotions.

Fake reviews

Fake reviews can massively damage brand reputation when these new platforms need to remain transparent to their communities in order to succeed, keep their token price stable, and have loyal users. For instance, a targeted bad review attack via bots can easily scare consumers away and cause a drop in token price.

Scam projects

The unregulated nature of NFTs and crypto gives room for scam projects to appear on major marketplaces as well as issues surrounding copyright and intellectual property. For instance, Vice has already covered some from late 2021, such as an NFT project developer who disappeared with \$2.7 million.

What Is Metaverse Fraud?

Data breaches

Well, data breaches are a global problem. As technology continues to become more accessible, metaverse platforms need to ensure the protection of their users' data or risk losing consumer trust.

Ecommerce related fraud

Handling online goods, even in a digital format, gives room for typical scenarios seen in the ecommerce sector such as chargebacks, friendly fraud, refunds, and other settlement disputes.

Lack of regulation

For both users and companies, the lack of compliance and regulation legislation in place at the moment allows room for damaging circumstances.

Volatility and market manipulation

Users often trade tokens without actually engaging with the platform itself to make money – and such risks as aggressive market manipulation, rug pulls and honeypots are something to be wary of for all involved.

Virtual world fraud

It is worth noting that many of the issues mentioned above have been about since before crypto even existed, in virtual worlds such as The Sims, World of Warcraft, and Second Life. So, there is an argument that the gaming companies that are involved in the space should be somewhat prepared.

Rug pulls

New tech brings opportunistic bad actors, the most famous possibly being a digital token inspired by the Netflix series Squid Game that was pitched as a play-to-earn metaverse game. \$SQUID turned out to be a complete scam and lost all of its value almost instantly, with the developers running away with all funds.*<https://seon.io/resources/metaverse-fraud/>

How Smart Are Smart Devices?

Experts predict that the metaverse will be operated with help from smart devices and augmented reality. These technologies will combine avatars, virtual reality headsets, and wearable NFTs.

While these devices can be beneficial, these wearables will collect data from users in their real lives and online lives. With an extraordinary amount of data being collected, threat actors will be even more interested in breaking in and causing data breaches of these identity passports.

As a result, there are concerns on where the data will go and how it will be regulated. Some consumers also worry about digital burglaries and how their reputation will be affected in the event of having their identity stolen in the metaverse.

As a result of these concerns, data and privacy regulations will be a leading global discussion for some time. [_https://www.eweek.com/security/fraud-in-the-metaverse/](https://www.eweek.com/security/fraud-in-the-metaverse/)

Alert raised on growing metaverse-related scams and illegal fundraising by Chinese financial services regulator amid market frenzy

The China Banking and Insurance Regulatory Commission said criminals are now getting involved in various metaverse investment projects and blockchain games

The warning comes at a time when the metaverse has become popular with Chinese technology companies and a growing number of investors

<https://www.scmp.com/tech/policy/article/3167614/chinese-financial-services-regulator-raises-alert-growing-metaverse>

China: Beware of scammers in the ‘deceptive’ metaverse, banking watchdog warns

One of China’s top financial regulators is warning the public about the risk of scams in the metaverse. The Chinese Banking and Insurance Regulatory Commission (CBIRC) issued the public warning when the metaverse has become the biggest buzzword in tech, reminding local investors to beware of fraudsters targeting innocent victims using metaverse-related projects.

The CBIRC claimed in its warning that the metaverse had become a hotbed of financial crime, with scammers “absorbing capital” from unsuspecting victims. *<https://coingeek.com/china-beware-of-scammers-in-the-deceptive-metaverse-banking-watchdog-warns/>

Meta intends to cash in on users seeking to customize their online personas, or avatars, with digital clothing and accessories.

Which is to say, it wants people to spend real money for make-believe goods that have no value in the real world.

This sort of thing is now common in video games, but on a relatively small scale. Meta and other metaverse proponents are hoping to make such digital sales a core part of people's online lives.

Citi bank, for one, estimates that the metaverse economy could be worth as much as \$13 trillion by 2030.

But Meta taking almost half of each online transaction? That doesn't sit well with some folk. Twitter comments have been almost uniformly negative.

Development of the metaverse is now guided primarily by wishful thinking. It apparently depends on widespread adoption of virtual-reality headsets, which has yet to happen, and on millions of users being cool with spending real money on things that don't exist in the real world.

But Meta's overenthusiastic bid to wet its beak in a big way on each online deal — that's the sort of thing that kills even the best ideas.* <https://www.kron4.com/news/the-metaverse-is-increasingly-looking-like-a-scam/>

The (current) Metaverse is a Scam !

Here's why I'm sceptical about the Metaverse and the promises that were made.

Ever since Mark Zuckerberg announced the name change of Facebook to Meta in 2021, there has been an exponential increase in interest surrounding the metaverse (whatever that means). This includes the rise in in-game cryptocurrencies such as \$SAND, \$MANA and \$AXS with a year-to-date return of about 16,853%, 4,219% and 18,016% respectively.

The (current) Metaverse is a Scam !

Furthermore, games and brands that are jumping on into the 'metaverse' idea are getting a boost from investors trying to get an early piece of the pie. Age-old brands like Coca-cola started selling NFTs. This seemed a bit unorthodox. As we all know, they have only been focused on selling sugared beverages.

Not only that, it gets even more ridiculous when a plot of land in The Sandbox has been sold for \$4.3 million. **REAL MONEY.**

I am all for cryptocurrencies and the development of virtual technology just like the one shown in Sword Art Online but personally, I fall on the more conservative side. The idea builds on the dream that it could be a place where people do work and play virtually. Social spaces and developments of new worlds allow individuals to explore and socialise. One example now is Roblox where social spaces can be made to set up virtual events and concerts.

The idea is bigger than just being a space to have fun but also to connect reality to the virtual world.

The (current) Metaverse is a Scam !

I feel that the hype surrounding the metaverse is just that, hype. Not because of the immaturity of the idea but instead, the idea has deflected from its true intention and purpose.

Let's fall back into what the metaverse might actually mean.

The Ideal Metaverse

What Is the Metaverse and Why Should I Care?

Once a niche concept, the idea of a centralized virtual world has careened into the mainstream landscape this year...

According to Time, the metaverse is an idea of a centralized virtual world where it mirrors the physical world. Scenes from films like Ready Player One and maybe animes like Sword Art Online should come to mind.

Characters wear a piece of equipment called the 'Nervegear' to enter the virtual world in Sword Art Online

Why We Hate the (current) Metaverse

However, as much as that is the ideal dream for the metaverse, the current state isn't. Even Elon Musk, the richest man in the world mocked the idea of the metaverse. He added that he did not think people would want to stay in the virtual world for too long, well at least, not in the current state where we have to put screens on our faces.

Even the idea of sitting in front of the television for long hours have always been discouraged, let alone plastering a screen on our faces for hours on end.

Personally, the current state of the metaverse has been shifted towards quick profit-making and less on the utility of the technology. I believe that the people that are jumping quickly into the idea of the metaverse are in it to be early 'adopters' just to make a quick return.

One example is that of NFTs. Once thought of as a new way to look and appreciate art is now riddled with scams, worthless 'artworks' and quick-flips.

To me, it feels like a huge pyramid scheme where the more people that bought in, the more money the early 'adopters' would make .

Many retail investors that I have been following jumped into the world of NFTs so that they can buy early and sell to the next incoming buyer.

90% of NFTs will be Worthless

According to Fred Ehrsam, the co-founder of Coinbase, 90% of NFTs will have no value in 3–5 years. NFTs are driven up in value because of hype and the 'community' that surrounds it. There is no inherent value in the art itself.

Once the 'community' is satisfied with sucking out the money from one another, the last person purchasing the NFT would be left holding the bag.

Why We Hate the (current) Metaverse

A possible utility that has been argued for NFTs is that you can use it to be placed in your metaverse homes, well at least for the art NFTs. Also, NFTs can be collectables in a game where people trade and sell to one another.

But that's just it. The utility of NFTs, in my opinion, is still debatable.

One fascinating thing that happened that I still cannot wrap my head around is the burning of an original Banksy art so as to convert it into a 'true' NFT.

'Morons' was an original artwork done up by Banksy and was sold for \$382,000 as an NFT. The thing is that they burned up the original physical copy so that the artwork will be a 'true' NFT. Whatever that means.

It is obvious that I am critical of the NFT market, however, my stand is that why would you want to have an artwork online that can be reproduced (other than the proof of ownership) instead of having it on your wall in reality?

"There's no way the metaverse is going to help with things like income inequality, or food deserts, people who cannot buy groceries, disparities and access to health care,"

— science fiction writer Ted Chiang

The current state of the Metaverse has still yet to prove itself useful to the less fortunate in society or to solve the problems of humanity such as global warming, income disparity, racial injustice etc.

The 'Value' of NFTs are still being Debated

As an investor in cryptocurrencies, I do not deny that there are potential benefits that the ideal metaverse can bring to society. However, I prefer the stand of Elon Musk which is that I do not see people leaving everything in reality behind to move into the metaverse.

Why We Hate the (current) Metaverse

What I see now is that whatever the current state of the metaverse is is just another hype and a marketing campaign to take the money from gullible retail investors with the promise that their 'investment' will pay off in the end. Unknowingly, their 'investments' might end up worthless. There is no 'value' yet as people are still unsure what the metaverse can bring aside from flipping NFTs for profit.

There would only be inherent value if the investors believe that these digitised spaces/items that they built have clear utility just like in Ready Player One.

Courtesy of Pexels.com

And just like the dot-com bubble, We think the metaverse bubble will pop soon.

The Bubble will Pop

Personally, I feel that the technologies that the development of the metaverse can bring should instead be used to benefit the current state of society. Elon Musk's development of Neuralink is to allow paraplegics and individuals with disabilities to use their arms and legs is one good example.

The metaverse still lies in the realm of high speculation and with time, only a few technologies and developments may last just like before the dot-com bubble.

Iceland Mocks Metaverse With New Ad Campaign

Iceland introduces... Icelandverse!

Iceland is known for its viral marketing campaigns, and a few days ago Iceland unveiled its latest such video, which is a hilarious parody of Zuckerberg's Metaverse. The 2min24sec video is intended to "introduce the Icelandverse," and it's narrated by a fictional character named Zack Mossbergsson, who is described as the "Chief Visionary Officer" (and he bears quite a resemblance to Zuckerberg).

Mossbergsson is intentionally awkward throughout the video. Rather than promoting all the cool things you can do in virtual reality, he highlights all of the fun things you can do in real life if you visit Iceland. Icelandverse is described as "a revolutionary approach of how to connect our world without being super weird," and as an "enhanced actual reality without silly-looking headsets."

You can watch the video for yourself here:

https://www.youtube.com/watch?v=8b0OBj4dTdw&feature=emb_rel_end

Mock the Metaverse at your peril

By [Alex Graves](#) published December 13, 2021

The sudden rush of news about the metaverse points to the future of work

You can find dozens of documents on this subject on the Internet. Every coin claiming to be the Metaverse has hurt you. And all. That's why we created a token with no selling pressure. Each coin must be purchased by paying money.

<https://www.itproportal.com/features/mock-the-metaverse-at-your-peril/>

Our own comments, These are definitely a metaverse scam

Let's joke and see the truth

With today's definition, the metaverse has always existed. Virtual meeting, game, these were always there. In fact, a lot of games were a thousand times better than the bullshit they're currently giving us as metaverses.

When you see a project selling virtual land, run away. You will definitely be scammed. And this is no different than a ponzi pyramid.

Elon musk thinks exactly the same as us. Apart from Elon musk's interest in crypto, we are sure that she is a very intelligent person who lives ahead of the times. His thoughts with the metaverse are obvious. and he is mocking too. Jokes are the greatest truth. All don't owner projects will definitely win with the right strategy.

Be sure, you are making the teams rich in all the projects that are currently being produced under the name of the metaverse.

Buying a land or object in the virtual world with real money?

This is bullshit man.

Later in the article, you will see that we are not the only one who thinks about it, there are dozens of people who agree with us.

Market Research

If you examine only the projects with the CMC metaverse tag, you will see that there are hundreds of metaverse coins or tokens.

Now I'm not going to tell you about the definitions of things like meta, facebook, oculus You can find them online. There is no point in prolonging the article unnecessarily. What I want to tell you is how long you will continue to enrich these projects.

There are successful projects among them. But how many of the gem tokens produced last year are alive today? Not even 1 year. In fact, these people buy web page domain names for 1 year. Because they will disappear afterward.

The money circulating in Metaverse tokens or coins is over \$1 billion. Please read carefully \$1 billion. We do not want this money to flow into fraudulent projects.

Do not buy any project with team tokens from now on!

Don't buy. If the team doesn't even have the money to buy its own product at a low price, can that team do business?

Market Research

If you examine the market in depth, there are projects with very serious studies as web3. But people don't invest in the project. People buy as they go up. That's why they love the hype, but they're losing money forever.

Stay away from any project that covets your 50\$100\$. Rugpull cannot be done in Mock. Liquidity will be locked for 4000 years. Mock tokens cannot be minted. The team cannot sell. Because there is no team token. Mock does not have any selling pressure.

There will not be a single mock token obtained for free. So we're gonna rock this market. Because he really took the dogecoin as an example. Even with Elon Musk, the same idea met.

In this metaverse bullshit with billions of dollars spinning around, we made it her goal to get the money that went into those scam projects.

What is The Mock ? Why Mock ?

Mock is a joke, it is a mockery, it is
a rebellion. It is a doge award-
winning project with huge potential,
tired of serious big boss unfulfilled
promises.

What is The Mock ?

The slippage that comes in the mock with a slippage value below 10 will be distributed as doge to the people they cut. Each project allocates 3 5 10 percent of the transfer fees to itself. This project is also that 1 percent. And this wallet address will be shared with the community. It will also be visible as charity in the contract part. It will be used for the advertisements mentioned in the advertising and marketing section.

In the mock, there will never be a wallet without fee. The slippage value will be constant for all wallets.

Mock will have antibot feature and will not allow bots to buy.

Mock is a decentralized, fully community-driven project owned by the entire community

Why is the Mock on the BSC Network?

We don't want you to pay hundreds of dollars of cuts on the eth network, or to have to upgrade your gas fee to complete your transaction. It should always be preferred fast. It is a cheap and fast network. It is also a network that can cause serious problems like a polygon network and that transactions are rarely stuck. BSC network is preferred because all systems work fine. Let's mock !

Why Doge Award?

Because he is like us. It's making fun of the system.

1. Because it has no owner.

3. Doge already has a strong community.

We aim to attract the attention of the doge community. A strong community is very important. Your prize doges will come to your account every day without pressing a button or needing to take action. So all mock holders will win. Don't you think it's perfect?

Doge starts off like a joke and talks about something very serious.

It called most of the cryptos you see now fake. Cryptos with serious goals are gone. But the doge will live forever.

2. Because like us. community oriented

We say that the metaverse is a big scam and we make mock of it.

You can simply impress your audience and add a unique zing and appeal to your Presentations.

Tokenomics

Mocking Metaverse

TOKEN NAME	MOCKING METAVERSE
SYMBOL	MOCK

Tokenomics

TOKEN FEATURES

KYC VERIFIED

KYC was done on the Pinksale platform. KYC helps you find the people involved in rugpull or scam situations.

AUDIT

MOCKING METAVERSE (MOCK) contract is audited and listed, check the report by link below. There is absolutely no mint function or similar function in Mock token. New tokens can never be minted.

LOCKED LIQUIDITY

Liquidity locked 4000 years. There's never a chance of a rugpull.

REFLECTION – DOGE REWARDS

Doge Award to Holders. " 5% " percent of each transaction will be distributed to all mock holders as doges.

AUTO LIQUIDITY

1% " percent of each transaction will be transferred to the automatic liquidity pool. Thus, the liquidity pool will grow continuously.

AGGRESSIVE MARKETING

" 1% " of every transaction will be transferred to ads marketing wallet. Thus, resources related to the aggressive market campaign will be collected.

Ads ve Marketing Wallet 0xC407Dec178CcEFb9a663c83832738550f61B2e1f

Tokenomics

DIAGRAM

MOCK TOKEN

TOTAL SUPPLY
100,000,000,000

TEAM HAS 0 TOKEN
The team has to buy tokens!

Presale

There is absolutely no whitelist.

Everyone will be able to participate equally. Bot purchases will not be allowed. We are using the pinksale antibot feature. It will happen as Fair Launch.

Soft Cap will be 75 BNB.

At least 50 BNB of this will be bought by the team. Advertisements will start with the pre-sale and many advertisements will be made the day before the pre-sale. You can find these in the whitepaper advertising strategies section. The pre-sale will only last 6 hours. This is a serious opportunity, be ready for a continuous upward chart.

The pre-sale will take place on the pinksale platform. Definitely beware of our imitations. Make sure you're on pinksale.finance.

Problems

Projects make great promises and create expectations

Roadmaps are full of imaginary targets, eg; In a roadmap you can see :D
NFT ,Web3,Metaverse ,Defi,Oracle,Stake,Swap ...

Teams dedicating themselves huge token amounts

They say that these were taken to develop the project. But they just fill their own pockets.

Unlocked liquidities

Liquidities are locked for 30-360, usually 180 days. What happens next? Rugpull when the lock is gone. Even large projects haven't too many locked liquidity projects.

The same token is given in the award-winning reflective tokens. Like, X token holders win x token. This creates selling pressure.

Problems

Having the concept of project ownership. Remember, if there is ownership, the system only serves its owner.

Ability to mint new tokens

Everything looks perfect in a cryptocurrency, but the token can be printed. This affects the supply in a terrible way. It creates sales pressure.

Solutions

We will never make exaggerated promises.

An upward graph without selling pressure will be created.

The team will not receive a single token for free.

We will be mock token investors ourselves.

Liquidity will be locked for 4000 years.

If god didn't bless us, we will probably be dead. If god didn't give us the opportunity to live 4000 years, no one can touch this liquidity. They will be locked on the pinksale platform with Certik certificates guaranteed.

Mock holders will receive another token, the doge, as a reward.

This will prevent a sale that may occur by selling the prize tokens.

Solutions

There will be no concept of project ownership.

The eternity of the contract will be preserved, no features in the Write contract section will be used.

The team will not receive a single token for free.

Even a new token will not be minted. There will be no related function. And this will be visible to audit and independent verifiers.

Financial Strategy

It will be completely transparent.

First of all, a part of the team budget will be reserved for pre-sale purchase. And with this amount, we will be the first investors of our own project. The project has a 1 percent wallet. In most projects, this is 2-5 percent. The peculiarity of this wallet is to receive one percent of a transaction slippage fee made on the network.

Many projects distribute their own tokens to holders as a reward. However, this creates selling pressure. That's why the doge will be given as a reward.

Fee deductions collected to 1 percent wallet will be used entirely for advertisements. In the advertising section, we recommend that you read the advertising strategies section.

Advertising is very important. All proceeds from the pre-sale will be allocated to advertising. We already have a clear 100x potential. With the right advertisement, this will easily pass 1000x.

There are some ad accounts that have 1m followers. Never has interactions and they have bots. We will definitely not let people who trust and invest in us get upset.

Financial Strategy

We will create a continuous upward graph with no selling pressure on it.

As in this project, you will not see such clear and transparent explanations in any whitepaper. This is the difference between you mock token investors. You will always have the most accurate information.

In our financial strategy, the finance part will be completely devoted to the advertising and market part. Therefore, be sure to read the advertising and marketing section.

Advertising is very important and requires a certain budget. Even if you are the most valuable diamond without advertising, who can find you?

Since the founders of the project are also project investors and own this token by paying out of pocket, all financial power will be primarily transferred to advertisements.

After the listings and after 6 months have passed, the fees required for the stock market listings will be set aside. However, no entry will be made to the stock markets that do not support our reflection features.

Advertising and Marketing Strategies

Accurate and effective advertising, pre-sales and post-sales non-stop !

Ads will be divided into two times. Pre-sale 5 twitter accounts will be used for advertising. And the ads will start the day before the pre-sale. People are forgetful. Therefore, twitter ads will start to be made 1 day before the pre-sale.

When choosing advertisements for the project, the most influential people will be selected. Advertisers are bullshit. It demands a lot of money, in return they sell you bots. Most are like that.

Many telegram pages have thousands of subscribers. However, writing is not allowed. Only token features are pinned. The effect of these ads is almost zero. We can clearly distinguish which ad is good and which ad is bad.

However, with the announcement of the pre-sale, the official listing of the coin hunter will be made and there will be continuous advertising until the pre-sale.

With the end of the pre-sale, a fast CG and CMC listing process will begin. With the entry of these platforms, the trend will be purchased. It is quite an expensive method and many people say they can do it, but it is a scam. We know the right people for this :D

At least 2 youtube videos will be prepared before the pre-sale. Available on two accounts. We respect the organicity of the audience of these two people.

Advertising and Marketing Strategies

Who we will work with in advertisements, this information is currently clear. However, we cannot reveal their names. It can complicate the bargaining process :D

After the pre-sale, an advertising and market attack will officially begin. In countries with the right influencers, we will act quite aggressively to work with them.

We will show everyone the potential of the mock token. We will perform the ads in countries that are interested in crypto.

We have a list that Pinksale offers for advertising and marketing. We are meeting with them. And they will be very useful and professional for advertisements.

However, you have a task to do here. We are all project partners. Don't forget to support us on social media. Tell those around you. Tell your superiors that there will never be a series of coin sales. Explain that the team is also a mock token investor. Talk about the Doge award. Tell him to read our whitepaper. People will come to thank you.

There is also this whitepaper, which has the answer to every question that may be on people's minds. We do not promise you dreams. Community is the owner of this project. We used to do AMAs in old projects when admin, mod .. However, its effects are almost zero. The answers to all your questions are right here.

Advertising and Marketing Strategies

You can always ask what you want from telegram, but our primary condition is that you have read the whitepaper. Please read the channel fixed messages and the whitepaper.

Welcome to one of the very few truly community-driven projects and the 100x journey. The first target is 100x. We will achieve this easily.

Twitter Activity

Elon Musk's mock video is at the entrance of our page. We agree exactly with what he said. Everything that comes out under the name of Metaverse and its future will steal your hopes.

Elon is important in crypto and he agrees with us. We will do all we can to get him to see this project on Twitter, because we know he reads the comments.

Bots will never be bought. There should be at least 10 likes on a 300-500-person page. Some projects have 30k followers. Likes 1. :D We don't want that.

It will be tweeted daily and the page will be kept active.

As the investors and partners of our project, please do not hesitate to support us on social media. Because you are a partner in this project. And there is no concept of ownership.

Telegram Activity

There will be an announcement and a global channel.

There won't be much hype admin.

Hype admins are bad. A question is asked. After the question cannot be answered, they fire 5 rockets and hide the question. Friend asked you a question? What's with the rocket? Please ask us any question about us. You will witness that we are growing completely organically.

To begin with, a total of 3 admins will be assigned. And 3 admins will be constantly active according to the time zone.

Since you are a mock partner as a project investor, you can get a volunteer mod tag and become a manager.

We don't need to spend money and buy dozens of hype admins. There is more than enough answer to every question in this whitepaper.

Telegram Activity

Why are there no local channels?

When local channels are opened, projects will either have to close them over time or dirty information will begin to be advertised in these groups. In the local language, deer is made a lot.

We do not want local groups in the short term. We cannot say anything to those who open groups themselves. But they will never be official channels. The common language of the world is English. And the global one will be an active telegram channel. If a token is also not allowed to be written on the global channel, then immediately run away. That project is 1000 percent fake.

REDDIT- GITHUB

Reddit

Twitter shares will be actively shared on the Reddit platform. The whitepaper manifest will appear on this page. It will be actively used.

Github

All inventories such as project source codes, whitepapers, project logo will be shared openly with the community.

Other social media pages will be activated one by one as the community gets stronger. Whatever it takes to be on every platform will be done.

TEAM

The most important feature of a team should be experience. We have been involved in dozens of projects before that. However, we didn't own any of the projects. You will understand how well we have mastered the projects from the solutions and answers we produce to every problem. We took part in many projects in areas such as mod, developer, graphic design and social media.

We know what projects did wrong and they were just trying to line their pockets. We know everything from how they sell, all open doors. We did KYC. We haven't any mock token without paid. We did this to build trust. There is no team in this project. In this project, everyone is a member of the team.

Why is there no team?

Because the team does not have any tokens that it receives without paying. Because the team don't sell. Because it's locked in liquidity forever and there's never, ever a chance of a rugpull.

The team has to buy tokens. In other words, even a single token cannot be obtained free of charge in the mock token. The team will actually invest a token and fight to increase it. In short, we are all a team. And everyone has a say. We will all make an investment and work towards its value. The team members are all in the same city and after much thought, they decided on this.

If Doge is out to make fun of other tokens and jokes, Mock token is also making fun of the metaverse. Because what's being hyped up as a metaverse right now is bullshit.

TEAM

4000 years locked liquidity.

There is not a single team token.

Bubble maps-style standalone applications will be used for tokenomics. and all wallet addresses will be shared with the community.

We have participated in dozens of pre-sales so far. We have been involved in dozens of projects. 99 percent of them are liars. They lock the tokens for a while. Then when the lock is opened they sell horribly. People are constantly hurting. Teams always win. In this project, we will put a stop to it.

Welcome to our project, which does not have even 1 token sales pressure and has a real 1000x potential.

This project has huge potential. All projects that have no owner in the world have been successful. Because they don't serve a group. They literally serve the community.

Project owner existing coins or tokens eg ETH. What will happen if Vitalik say that my is broken, my psychology is broken today? Will it lose value? Or are people just obligated to the eth network? Project ownership and the publicity of these people is actually a disadvantage for the project, not an advantage in crypto.

That is why it is very important that there are no project owners. Like BTC, Doge, Mock. We will also be mock investors . Why should we get an income under the name of the team just because we have developed a web page, twitter, telegram and a smart contract. We will offer you endless transparency with all its stages and we will present the mock token to humanity. Like Doge and BTC. And we're going to show everyone that there's been a scam under the name of the metaverse.

TEAM

And these two lies will never be told.

1. We work hard :D

Dude, what are you doing in the background, Big nothing. You don't develop contracts, because the contract development phase is over. You don't write code.

2 3 people are asking questions. We are working on the answer. What are you trying to do? You are not working, but you are selling teams tokens.

Because 1 tweet, 1 message on telegram. Is mean that working? Even the web pages of most projects are out of date. All of them are stolen and simple crypto theme .

2. The team will take care of it.

What does this mean? We have no answer to give you. Let's pass it off by saying it will be taken care of. That's the whole point. The answer to every question that comes to your mind is in this document, because everything is very clear and clear.

Even those fancy metaverse projects have blank white papers. Most projects are also 2 pages. And almost all of them were stolen from right to left.

TEAM

I am William Wallace. I will try to deal with bloodsuckers, reveal the truth, try to be fair, and create an upward graph all the time.

If you have invested in this token, you are now our partner. Welcome. Let's announce this unique and sincere opportunity to everyone.

Let's joke, let's mock, but remember jokes are the greatest truths.

Please always keep this whitepaper in mind when investing from now on.

Why will the stock market listing not be early?

We know that you want hype, expectation and price increase. Early listing of reflective, that is, automatic staking, tokens that enter the exchanges early is a disaster.

We have seen this in dozens of projects. We can also give their names. This early listing causes the following. There is no slippage and reflection feature in the stock market. There is no token reward for holding it. Even if you wait in pancakeswap, most of the volume will shift to the exchanges. This means harm to holders.

If an exchange wants to list us even for free, we will complain. No stock market listing for 6 months. We don't have a penny to give to those lousy bloodsuckers.

How is the stock market listing?

Project owners fill out the form. Or project admins can be reached via telegram.

10k-50k sometimes 200k money is requested. So even if you are crap coin, if you have money, you are in the stock market. Every transaction appears transparently on the pancake. But it is not seen in the stock market.

After the money is paid, the text of the agreement is sent, it's nonsense. Just write your name and surname, sign, scan and send it to them.

MM account required, real KYC. However, you can also make an MM account through a company. In other words, the stock markets are not as safe as it seems.

Why will the stock market listing not be early?

Yes, the project is on the stock market. What happened now ? Arbitrageurs destroy the project. Purchases and sales are no longer visible. Reflection features do not work. Or, because the volume has shifted to another place, it does not earn as much as before. The team constantly sells the token on the stock market.

Finally delist .

We don't want fast listing the stock markets. When the exchanges see high volume, they will list themselves. But we will prevent this.

Early listing is disastrous for the gem token. Some major exchanges are project dumps. There are 3-5 exchanges that we will not write their names. Complete bloodsuckers. These are the garbage who take the money of the projects because they will give CMC and CG support to the project.

Do not let money be stolen for other Project owners, CMC and CG. Maybe you can speed up the process. They have hundreds of projects to review. They may look at yours 1 minute ago but will never list you until you meet the review criteria. A brother's advice for you.

After the first 6 months, we will enter the exchanges that support our reflection features. But if there are no reflection features, we do not exist.

And when you, dear readers, invest in reflective tokens, don't pressure them for an early stock market listing.

Why will the stock market listing not be early?

If you force an exchange listing, sell all your tokens along with the exchange listing. There is a small minority that believes in projects and a large group that wants to become rich. Just because they're crowded doesn't mean they're telling the truth.

Remember that exchanges are project dumps, their only concern is to earn more transfer fees and they want to make money with listing.

So long live and prosper decentralized exchanges.

Decentralized crypto but centralized exchange or tokens, get lost.

We will make a continuous upward graph in the mockup. Because team don't sell tokens. Cannot sell in bulk. And they will be holders in the doge wants to win. You will witness this terrible rise.

Roadmap

Goals will be fulfilled completely and on time.

2022
Q2

- 1-) Certik Audit
- 2-) New Whitepaper prepare with mock army

2022
April

- 1-) Reaching 10k holders
- 2-) CMC Listing
- 3-) CG Listing
- 3-) CG and CMC Trend
- 4-) Starting aggressive advertising and marketing activities
- 5-) Reaching 10k followers on social media accounts

2022
April

- 1-) Pre-sale launch ✓
- 2-) KYC & Audit ✓
- 3-) Ads before pre-sale
- 4-) Official Listing Like Coinhunter platform
- 5-) Collecting 10K BNB investment in pre-sale

2022
Q1

- 1-) Researching and preparing for the whitepaper ✓
- 2-) Opening Social Media Accounts ✓
- 3-) Opening the website ✓

Roadmap

These goals will be fully fulfilled and then the new map will be determined together as the whole community. Let's pretend now we will open a pancakeswap or bakeryswap pool. It's totally false. Why? Because where will the required token for this stake be found? There is no token reserved for this.

All goals will be realistic and will be shaped according to the wishes of the community. Together we will win. Like other projects, we will not write and lie about NFT, Web3, IOT, Oracle, Metaverse, Game.

Warning

*Make sure you are on pinksale.finance when participating in the pre-sale.

*If a second contract address is shared, never take it. Follow all our announcements on our official telegram channel.

*Make sure you are connected to the pancakeswap.finance website when making a sale.

*Never send BNB to the contract and pre-sale address.

*Please be sensitive to scam channels and our imitations. Just check the information from our official telegram channel, twitter address and website.

*There will never be a private sale.

*Project admins never demand money from you.

*Please beware of vile thieves.

Social Media

We wait to your support for our social media channels.
